

Build and Run a Container

Build the Docker image

```
docker build -t <image-name> .
```

Run the container:

```
docker run -d --name <container-name> <image-name>
```

You can verify it's working by checking the logs with:

```
docker logs <container-name>
```

Or by viewing the cron log specifically:

```
docker exec -it <container-name> tail -f /var/log/cron.log
```
