

Kubernetes Commands

Access inside a pod

```
kubectl exec -ti <pod_name> -n <namespace_name> -- /bin/bash
```

Find and stop pods

```
for i in `kubectl get deployment -n <namespace> | grep <pod-name-prefix> | awk '{print $1}'`  
do  
    echo $i  
    kubectl scale deployment $i -n <namespace> --replicas=0  
done
```

Find and start pods

```
for i in `kubectl get deployment -n <namespace> | grep <pod-name-prefix> | awk '{print $1}'`  
do  
    echo $i  
    kubectl scale deployment $i -n <namespace> --replicas=1  
done
```
